

**"G" REQUIREMENT ELECTIVES**

**ECOLOGY AB**

**Annual or Semester Course—Grade 9 - 12. All students in Grades 9-11 must have concurrent enrollment in a science course which is assessed by the California State Contents Standards Test to participate in this science elective.**

- 36-05-01        ECOL A**
- 36-05-02        ECOL B**

**Course Description**

The major purpose of this course is to explain the complex interdependence of organisms in different environments (terrestrial, saltwater, and freshwater). This course examines human needs and interactions with both biotic and abiotic environmental factors. Laboratory activities and field studies develop skills in classification and identification of flora and fauna. **Ecology AB meets one year of the University of California ‘g’ requirement for an elective science class.**

**Instructional Units and Pacing Plans**

INSTRUCTIONAL UNITS	*SUGGESTED WEEKS	
Function and Energy Flow	2	3
Adaptation and Homeostasis	3	4
Natural Selection	2	2
Environment and Niche	3	3
Demes and Dispersion	3	4
Population Growth and Logistics	2	2
Regulation	2	2
Survivorship and Productivity	2	2
Population Case Studies	1	2
Community Structure	3	3
Symbiosis: Parasites and Mutualists	3	4
Competition	2	2
Predation	2	2
Diversity	2	3
<b>Total</b>	<b>*32</b>	<b>*38</b>
	<b>year-round</b>	<b>traditional</b>

\*Suggested weeks are to be used as an estimate only. Pacing will depend on how State Content Standards and the Literacy and Mathematics Initiatives are embedded.

**Representative Performance Outcomes and Skills**

*In accordance with their individual capacity, students will grow in the ability to:*

- Demonstrate process skills of scientific thinking: observing, communicating, comparing, ordering, categorizing, relating, inferring, and applying.
- Demonstrate skills in the areas of speaking, listening, writing, reading, graphing, mapping skills, and mathematics.
- Handle safely the equipment and materials common to chemistry laboratory.
- Evaluate the contributions of science and technology and their relevance to improving our daily lives in preparation for the future.

Los Angeles Unified School District  
*Secondary Science Branch*

- Establish the relevance of science and its applications to careers and real-life situations.
- Select and use appropriate tools and technology (such as computer-linked probes, spreadsheets, and graphing calculators) to perform tests collect data, analyze relationships, and display data.\*
- Identify and communicate sources of unavoidable experimental error.\*
- Identify possible reasons for inconsistent results, such as sources of error or uncontrolled conditions.\*
- Formulate explanations by using logic and evidence.\*
- Solve scientific problems by using quadratic equations and simple trigonometric, exponential, and logarithmic functions.\*
- Distinguish between hypothesis and theory as scientific terms.\*
- Recognize the usefulness and limitations of models and theories as scientific representations of reality.\*
- Read and interpret topographic and geologic maps.\*
- Analyze the locations, sequences, or time intervals that are characteristic of natural phenomena (e.g., relative ages of rocks, locations of planets over time, and succession of species in an ecosystem).\*
- Recognize the issues of statistical variability and the need for controlled tests.\*
- Recognize the cumulative nature of scientific evidence.\*
- Analyze situations and solve problems that require combining and applying concepts from more than one area of science.\*
- Investigate a science-based societal issue by researching the literature, analyzing data, and communicating the findings. Examples of issues include irradiation of food, cloning of animals by somatic cell nuclear transfer, choice of energy sources, and land and water use decisions in California.\*
- Know that when an observation does not agree with an accepted scientific theory, the observation is sometimes mistaken or fraudulent (e.g., the Piltdown Man fossil or unidentified flying objects) and that the theory is sometimes wrong (e.g., the Ptolemaic model of the movement of the Sun, Moon, and planets).\*
- Investigate a societal issue by researching literature, analyzing data and communicating findings and discuss possible future outcomes.
- Demonstrate interconnections between the many disciplines of science.
- Demonstrate the interdisciplinary connections between science and other curricular fields.

**Assessments**

Instruction in our district is assessment-driven. The Framework states "that effective science programs include continual assessment of student's knowledge and understanding, with appropriate adjustments being made during the academic year (p.11)."<sup>1</sup> Assessments can be on demand or over a long period of time. The District Periodic Assessments and STAR State Testing play a significant role in Student Assessments.

The chart below, adapted from *A Guide for Teaching and Learning*, NRC (2000), gives some examples of on demand and over time assessment.

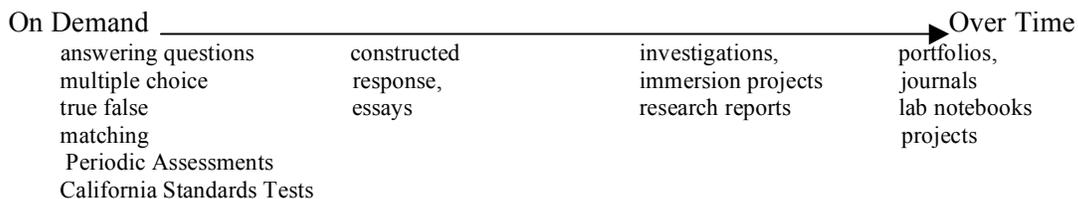

Chart 1 - Assessment Examples
