Office of Curriculum, Instruction and School Support

COURSE DESCRIPTION

Common Core Math 6 Tutorial Lab is designed to provide foundational knowledge and intervention for students enrolled in or preparing to enroll in *Common Core Math 6*. This course serves not only as intervention, but also as support for students experiencing difficulty in mastering the core standards and academic language constraints of the *Common Core Math 6* course. *Common Core Math 6 Tutorial Lab* is an elective mathematics course provided to students as a supplemental course to enhance the student's knowledge of prerequisite skills and academic language that is required in order to successfully access the standards-based *Common Core Math 6* course.

COURSE SYLLABUS

The structure of this course is divided into four separate, but coherent, units mirroring the *Common Core Math 6* course. Additionally, **an immense element of this intervention course is an emphasis on student engagement with the Standards for Mathematical Practice on a daily basis.** Students enrolled in this intervention course **need to be assessed** on an ongoing basis to determine their needs for support and intervention. Teachers are encouraged to adapt their instruction through ongoing formative assessments to provide genuine, differentiated instruction. The outcome of the initial and ongoing assessments are to analyze and identify key skills and concepts required for students to access the Common Core State Standards, compare those requirements to the student's existing skill set, and analyze any potential student deficits.

The goal of this intervention course is to support *Common Core Math 6* and to provide explicit, systematic, and intensive instruction for at-risk populations. As teachers strive to assist struggling students to reach the Common Core State Standards' expectations, they must be able to accurately identify areas of student deficit and match students to an appropriate academic intervention plan. An expectation from the *Common Core Math 6 Tutorial Lab* is to create evidence-based intervention plans that are customized to individual students, and that are also tied to specific Common Core Standards.

According to the California CCSS Mathematics Framework (November 2013),

“Universal Access in education is a concept which utilizes strategies for planning for the widest variety of learners from the beginning of the lesson design and not ‘added on’ as an afterthought. Universal Access is not a set of curriculum materials or specific time set aside for additional assistance but rather a schema. For students to benefit from universal access, teachers may need assistance in planning instruction, differentiating curriculum, infusing Specially Designed Academic Instruction in English (SDAIE) techniques, using the California English Language Development Standards (CA ELD standards), and using grouping strategies effectively.”

Los Angeles Unified School District
Office of Curriculum, Instruction and School Support

Therefore, through careful planning for modifying curriculum, instruction, grouping, and assessment techniques, teachers are well prepared to adapt instruction to meet the needs of diverse learners in their classrooms.

RATIONALE FOR SELECTED STANDARDS TO SUPPORT CC MATH 6

In analyzing the 6th Grade Common Core State Standards listed in the LAUSD Curriculum Maps, the standards that were selected for this course are based on prerequisite standards needed to successfully master the Common Core State Standards for 6th Grade mathematics. The objective is to support students transitioning from the 1997 California Content Standards to the Common Core State Standards and to help ensure success in CC Math 6.

Standards that have been added to the 6th grade with this transition include: unit rate; measurement unit conversions; opposite and absolute values on the number line; vertical and horizontal distances on the coordinate plane; the distributive property and factoring; the introduction of independent and dependent variables; volume of right rectangular prisms with fractional edges; surface area with nets; dot plots; histograms; box plots; and statistical variability.

MULTI-TIER MATHEMATICS INTERVENTIONS

Gersten et. al. (2009) in the Practice Guide “[Assisting Students Struggling with Mathematics: Rtl for Elementary and Middle School](#)” presented evidence for the effectiveness of combinations of systematic and explicit instruction that include teacher demonstrations and think alouds early in the lesson, unit, or module; student verbalization of how a problem was solved; scaffolded practice; and immediate corrective feedback. In instruction that is systematic, concepts are introduced in a logical, coherent order and students have many opportunities to apply each concept. Below are the recommendations (Recommendations 3 and 4 received strong evidence rating).

Recommendation 1. Screen all students to identify those at risk for potential mathematics difficulties and provide interventions to students identified as at risk. *It is suggested that you use any of the following instruments to screen students: MDTP, Scholastic Math Inventory, Easy CMB, etc.*

Recommendation 2. Instructional materials for students receiving interventions should focus intensely on in-depth treatment of whole numbers in kindergarten through grade 5 and on rational numbers in grades 4 through 8. These materials should be selected by committee.

Recommendation 3. Instruction during the intervention should be explicit and systematic. This includes providing models of proficient problem solving, verbalization of thought processes, guided practice, corrective feedback, and frequent cumulative review.

Recommendation 4. Interventions should include instruction on solving word problems that is based on common underlying structures. *Teachers may consider using some of the strategies in “[Improving Mathematical Problem Solving in Grades 4 Through 8](#)” in teaching students problem solving.*

**Los Angeles Unified School District
Office of Curriculum, Instruction and School Support**

Recommendation 5. Intervention materials should include opportunities for students to work with visual representations of mathematical ideas and interventionists should be proficient in the use of visual representations of mathematical ideas.

Recommendation 6. Interventions at all grade levels should devote about 10 minutes in each session to building fluent retrieval of basic arithmetic facts.

Recommendation 7. Monitor the progress of students receiving supplemental instruction and other students who are at risk.

Unit 1		
Using Concepts of Rate and Ratio to Solve Problems		
Concepts/Clusters	Prerequisite Standards to Support CC Math 6	Suggested Resources
<p>Understand ratio concepts and use ratio reasoning to solve problems.</p>	<p>4.OA.2: Multiply or divide to solve word problems involving multiplicative comparison, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem, distinguishing multiplicative comparison from additive comparison.</p> <p>4.MD.1: Know relative sizes of measurement units within one system of units including km, m, cm; kg, g; lb, oz.; l, ml; hr, min, sec. Within a single system of measurement, express measurements in a larger unit in terms of a smaller unit. Record measurement equivalents in a two-column table. <i>For example, know that 1 ft is 12 times as long as 1 in. Express the length of a 4 ft snake as 48 in. Generate a conversion table for feet and inches listing the number pairs (1, 12), (2, 24), (3, 36), ...</i></p> <p>5.NF.5: Interpret multiplication as scaling (resizing),</p>	<ol style="list-style-type: none"> 1. Illustrative Mathematics: Comparing Money Raised https://www.illustrativemathematics.org/illustrations/263 2. Concepts/Clusters	Standards to Support CC Math 6	Suggested Resources
	<p>c. Recognize volume as additive. Find volumes of solid figures composed of two non-overlapping right rectangular prisms by adding the volumes of the non-overlapping parts, applying this technique to solve real world problems.</p> <p>5.G.2: Represent real world and mathematical problems by graphing points in the first quadrant of the coordinate plane, and interpret coordinate values of points in the context of the situation.</p>	
Examples of Essential Questions for Unit 4		Standards for Mathematical Practice
<ol style="list-style-type: none"> Why is the collection, organization, interpretation, and display of data important to finding a solution to a question? Why is precision important when making a line plot to display a data set of measurements? How does knowing that “B is the area of the base” help to remember the formula for a rectangular prism? A triangular prism? Or, a cylinder? 		<ol style="list-style-type: none"> Make sense of problems and persevere in solving them. Reason abstractly and quantitatively. Construct viable arguments and critique the reasoning of others. Model with mathematics. Use appropriate tools strategically. Attend to precision. Look for and make use of structure. Look for and express regularity in repeated reasoning.
Performance Objectives for Unit 4 <i>Students will grow in their ability to:</i>		*Guiding Questions for Implementing Standards for Mathematical Practices #7 and #8
<ol style="list-style-type: none"> Make a line plot to display a data set of measurements in fractions of a unit. Solve problems involving data from line plots. 		<ol style="list-style-type: none"> What observations have you made about ...? What do you notice when ...? What parts of the problem might you eliminate?

Performance Objectives for Unit 4 <i>Students will grow in their ability to:</i>	*Guiding Questions for Implementing Standards for Mathematical Practices #7 and #8
3. Provide verbal summaries for the area and perimeter of rectangles. 4. Solve multi-step, real world math problems 5. Create arrays to model the area and perimeter of rectangles. 6. Use arrays to find the area and perimeter of rectangular shapes in the real world. 7. Identify right rectangular prisms. 8. Find the volumes of right rectangular prisms by multiplying the dimensions. 9. Decompose 3-dimensional figures into right rectangular prisms to find its' volume. 10. Know that 'B', is the area of the base. 11. Use this information to solve real world problems.	4. How would you know if ... makes a pattern? 5. What useful ideas have we learned before that come in handy when solving this problem? 6. How does this relate to ...? 7. In what ways might this problem connect to other mathematical concepts? 8. Will the same strategy work in other situations? 9. Is this always true, sometimes true, or never? 10. How would you prove that ...? 11. What is happening in this situation? 12. Could we make a mathematical rule for ...? 13. What mathematical consistencies do you notice? 14. What predictions or generalizations can this pattern support?

*NOTE: The *Guiding Questions for Implementing Standards for Mathematical Practices* should be used throughout ALL units and are not exclusive to any particular unit.

TOOLS TO ENGAGE KINESTHETIC AND VISUAL LEARNERS

The following are a just a few hands-on manipulatives to engage and support the learning for our kinesthetic and visual learners.

Base Ten Materials Geoboards Cube-a-links Pattern Blocks Attribute Blocks Cuisenaire Rods Fraction Circles Fraction Pattern Blocks Geometric Shapes (<i>Shapes including pentagons, hexagons, octagons, triangles, parallelograms, squares, circles, half-circles, trapezoids</i>) Plastic Polygon Shapes	Transparent Counters Two-Colored Counters Color Tiles Algebra Tiles Assorted Number Dice Balances Colored Wooden Cubes Geometric Solids (<i>cones, cubes, pyramids, prisms, cylinders, spheres</i>) Hundred Number Wall Chart Miras Money Kits

INSTRUCTIONAL STRATEGIES FOR IMPLEMENTING THE STANDARDS FOR MATHEMATICAL PRACTICES

The following instructional strategies represent just a short list of strategies recommended to ensure student engagement with the Standards for Mathematical Practices, as well as the Common Core College and Career Readiness Anchor Standards for Literacy (Reading, Writing, Speaking, and Listening).

Instructional Strategies	Description
1. Activating Prior Knowledge	<i>Activating Prior Knowledge</i> allows students to connect concepts learned previously to content being taught at the time. This strategy ensures coherence throughout the course.
2. Carousel	<i>Carousel</i> allows for students to collaborate on a particular problem in groups of 3-4. Students take turns with working on a problem, passing it around, round-robin style as they add to solving the problem, while checking the work of others throughout the process.
3. Corners	The <i>Corners</i> strategy works by having students select from four options (which are posted in each of the corners of the room). Once students have chosen their corners, they may be asked to defend their choice and listen to their peers' reasons for choosing a particular option, or corner.
4. Error Analysis	This strategy calls for students to analyze a problem that has been solved incorrectly. They must work with a partner to figure it out, discuss their findings, write the correct solution, and write a few paragraphs on their process and thinking.
5. Exit Tickets	<i>Exit Tickets</i> help students synthesize the learning of the day's lesson. These can be simple questions or quick-writes for students to submit at the end of the period.
6. Multiple Representations	This strategy allows students to create multiple representations in the form of pictures, tables, graphs, equations, formulas, and other models to analyze and interpret data and/or other information.

Office of Curriculum, Instruction and School Support**

Instructional Strategies	Description		
7. Poster Presentations	Students use large flip chart paper (during any stage of instruction) to collaborate, provide visuals, and solve problems. After each group is done creating posters, they may present them to the larger group or conduct a “gallery walk” to see each group’s findings.		
8. Questioning the Text	This strategy allows students to question the text, the problem or the situation. They can annotate and collaborate to incite discourse in the classroom.		
9. Sentence Frames	<p>Sentence Starters give students a structure for sharing their thoughts and ideas and guide accountable talk. Examples for use include:</p> <table style="width: 100%; border: none;"> <tr> <td style="width: 50%; vertical-align: top;"> <p>I think the best way to solve this problem is ... I would not solve it this way because ... I (agree/disagree) because ... I don’t think that will work because ... I tried ... I think ... will happen. I solved the problem like this because ... What if we tried ... I have another approach to the problem. What about ...</p> </td> <td style="width: 50%; vertical-align: top;"> <p>I understand what you are saying, but what about ... Now I understand ... because ... I agree with ... because ... At first, I though ... but, now I think ... I agree with ... because ... What I hear you saying is ... I don’t understand ... but, I do understand ... Another approach to this problem could be ...</p> </td> </tr> </table>	<p>I think the best way to solve this problem is ... I would not solve it this way because ... I (agree/disagree) because ... I don’t think that will work because ... I tried ... I think ... will happen. I solved the problem like this because ... What if we tried ... I have another approach to the problem. What about ...</p>	<p>I understand what you are saying, but what about ... Now I understand ... because ... I agree with ... because ... At first, I though ... but, now I think ... I agree with ... because ... What I hear you saying is ... I don’t understand ... but, I do understand ... Another approach to this problem could be ...</p>
<p>I think the best way to solve this problem is ... I would not solve it this way because ... I (agree/disagree) because ... I don’t think that will work because ... I tried ... What about ...</p>	<p>I understand what you are saying, but what about ... Now I understand ... because ... I agree with ... because ... At first, I though ... but, now I think ... I agree with ... because ... What I hear you saying is ... I don’t understand ... but, I do understand ... Another approach to this problem could be ...</p>		
10. Think Alouds	In <i>Think Alouds</i> , students orally dictate their thought process to show their comprehension of a problem, text or situation. It helps when trying to make sense of problems and considering different access points to solving a problem.		
11. Think-Pair-Share	Students engage in <i>Think-Pair-Share</i> by initially thinking about a problem or situation independently, then pair up with a classmate to share their thoughts or ideas.		
12. Think-Ink-Pair-Share	An alternative to <i>Think-Pair-Share</i> is <i>Think-Ink-Pair-Share</i> which allows students to think independently, write their thoughts on paper, and then pair up with a partner to share their thoughts.

SAMPLE TASKS TO SUPPORT CC MATH 6

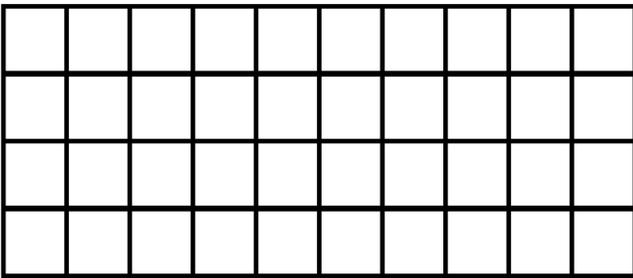

The following are a few examples to help support student learning in this course. These examples are not meant to be exhaustive, but are representative of the types of tasks that should be afforded to students enrolled in the course.

Sample Tasks to Support Common Core Math 6 Tutorial Lab

Sample Task #1: *Fractions, Decimals, and Percents*

Task:

Shade 8 of the small squares in the rectangle shown below. Then, determine the fraction, decimal, and percent represented by the shaded squares.

Using the diagram above, explain how to determine each of the following:

1. The fractional part of the shaded area
2. The decimal part of the shaded area
3. The percentage part of the shaded area

Source: Adapted from LAUSD MIG, Concept Task Grade 6

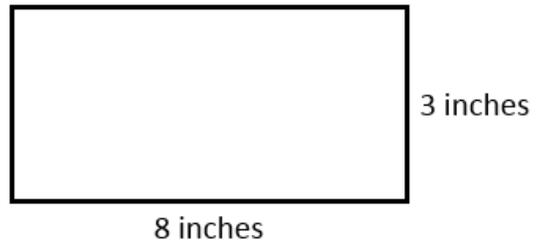

Sample Task #2: *Area and Perimeter*

Task:

1. The perimeter of this rectangle is $2(5 + 2) = 14$ inches. The area of this rectangle is $2 \times 5 = 10$.

- a) Draw a diagram of a rectangle with the same perimeter, but a larger area. Write down the area of your rectangle.
 - b) Draw a diagram of a rectangle with the same perimeter, but a smaller area. Write down the area of your rectangle.
2. The perimeter of this rectangle is 22 inches. The area of this rectangle is 24 square inches.

- a) Is it possible to draw a rectangle with the same area as the one above, but with a larger perimeter? Explain your reasoning.
- b) Is it possible to draw a rectangle with the same area, but a smaller perimeter? Explain

	<p style="text-align: center;">your reasoning.</p> <p>Source: Adapted from MARS Tasks (Grade 6)</p>
<p style="text-align: center;">Sample Task #3: Pick Any Three</p> <p>Task:</p> <p>Pick any 3-digit number where not all the digits are equal. Order the digits from highest to lowest to create the largest number. Next, order the digits from lowest to highest to create the smallest number. Find the positive difference between the two numbers. Investigate different solutions you find. Are there any patterns? If so, what patterns did you find?</p> <ol style="list-style-type: none"> 1. Complete the same process for two different numbers. Would two different 3-digit numbers produce the same solution (difference) when following the process? 2. What can you predict about the solutions (differences) in terms of specific digits (hundreds, tens, ones)? 3. What other relationships are there between the digits? 4. Explain your findings. <p>Source: Problem of the Month from www.insidemathematics.org</p>	<p style="text-align: center;">Sample Task #4: Summer Vacation</p> <p>Task:</p> <p>It is summer vacation and you can go to the museum more often. The rates change for a summer special.</p> <div style="border: 1px solid black; padding: 10px; margin: 10px 0;"> <p style="text-align: center;">Museum Summer Rate Plans</p> <p>Plan A: Pay \$ 2.75 per person to visit the museum.</p> <p>Plan B: Monthly membership is \$7.50 for each person, but you can go as many times as you like during the month.</p> <p>Plan C: A family membership for a month is \$15.25. Everyone in your family can go as often as they like for a month.</p> </div> <p>If you and your brother want to go to the museum eight times during the three months of summer, which one plan should you use and when should you go to save the most money?</p> <p>What if you can't go as you originally planned? What other plans might you use? State when you would attend and the best plan(s) to use. Explain your thinking.</p> <p>Source: Problem of the Month from www.insidemathematics.org</p>
