

Los Angeles Unified School District
Office of Curriculum, Instruction and School Support

COURSE DESCRIPTION

Common Core Math 7 Tutorial Lab is designed to provide foundational knowledge and intervention for students enrolled in or preparing to enroll in *Common Core Math 7*. This course serves not only as intervention, but also as support for students experiencing difficulty in mastering the core standards and academic language constraints of the *Common Core Math 7* course. *Common Core Math 7 Tutorial Lab* is an elective mathematics course provided to students as a supplemental course to enhance the student's knowledge of prerequisite skills and academic language that is required in order to successfully access the standards-based *Common Core Math 7* course.

COURSE SYLLABUS

The structure of this course is divided into four separate, but coherent, units mirroring the *Common Core Math 7* course. Additionally, **an immense element of this intervention course is an emphasis on student engagement with the Standards for Mathematical Practice on a daily basis.** Students enrolled in this intervention course **need to be assessed** on an ongoing basis to determine their needs for support and intervention. Teachers are encouraged to adapt their instruction through ongoing formative assessments to provide genuine, differentiated instruction. The outcome of the initial and ongoing assessments are to analyze and identify key skills and concepts required for students to access the Common Core State Standards, compare those requirements to the student's existing skill set, and analyze any potential student deficits.

The goal of this intervention course is to support *Common Core Math 7* and to provide explicit, systematic, and intensive instruction for at-risk populations. As teachers strive to assist struggling students to reach the Common Core State Standards' expectations, they must be able to accurately identify areas of student deficit and match students to an appropriate academic intervention plan. An expectation from the *Common Core Math 7 Tutorial Lab* is to create evidence-based intervention plans that are customized to individual students, and that are also tied to specific Common Core Standards.

According to the California CCSS Mathematics Framework (November 2013),

“Universal Access in education is a concept which utilizes strategies for planning for the widest variety of learners from the beginning of the lesson design and not ‘added on’ as an afterthought. Universal Access is not a set of curriculum materials or specific time set aside for additional assistance but rather a schema. For students to benefit from universal access, teachers may need assistance in planning instruction, differentiating curriculum, infusing Specially Designed Academic Instruction in English (SDAIE) techniques, using the California English Language Development Standards (CA ELD standards), and using grouping strategies effectively.”

Los Angeles Unified School District
Office of Curriculum, Instruction and School Support

Therefore, through careful planning for modifying curriculum, instruction, grouping, and assessment techniques, teachers are well prepared to adapt instruction to meet the needs of diverse learners in their classrooms.

RATIONALE FOR SELECTED STANDARDS TO SUPPORT CC MATH 7

In analyzing the 7th Grade Common Core State Standards listed in the LAUSD Curriculum Maps, the standards that were selected for this course are based on prerequisite standards needed to successfully master the Common Core State Standards for 7th Grade mathematics. The objective is to support students transitioning from the 1997 California Content Standards to the Common Core State Standards and to help ensure success in CC Math 7.

Standards that have been added to the 7th grade with this transition to Common Core includes: constant of proportionality, factoring to create equivalent expressions, triangle side lengths, area and circumference of circles, complementary, supplementary, and vertical angles, surface area and volume of pyramids, and probability.

MULTI-TIER MATHEMATICS INTERVENTIONS

Gersten et. al. (2009) in the Practice Guide “[Assisting Students Struggling with Mathematics: Rtl for Elementary and Middle School](#)” presented evidence for the effectiveness of combinations of systematic and explicit instruction that include teacher demonstrations and think alouds early in the lesson, unit, or module; student verbalization of how a problem was solved; scaffolded practice; and immediate corrective feedback. In instruction that is systematic, concepts are introduced in a logical, coherent order and students have many opportunities to apply each concept. Below are the recommendations (Recommendations 3 and 4 received strong evidence rating).

Recommendation 1. Screen all students to identify those at risk for potential mathematics difficulties and provide interventions to students identified as at risk. *It is suggested that you use any of the following instruments to screen students: MDTP, Scholastic Math Inventory, Easy CMB, etc.*

Recommendation 2. Instructional materials for students receiving interventions should focus intensely on in-depth treatment of whole numbers in kindergarten through grade 5 and on rational numbers in grades 4 through 8. These materials should be selected by committee.

Recommendation 3. Instruction during the intervention should be explicit and systematic. This includes providing models of proficient problem solving, verbalization of thought processes, guided practice, corrective feedback, and frequent cumulative review.

Recommendation 4. Interventions should include instruction on solving word problems that is based on common underlying structures. *Teachers may consider using some of the strategies in “[Improving Mathematical Problem Solving in Grades 4 Through 8](#)” in teaching students problem solving.*

Recommendation 5. Intervention materials should include opportunities for students to work with visual representations of mathematical ideas and interventionists should be proficient in the use of visual representations of mathematical ideas.

**Los Angeles Unified School District
Office of Curriculum, Instruction and School Support**

Recommendation 6. Interventions at all grade levels should devote about 10 minutes in each session to building fluent retrieval of basic arithmetic facts.

Recommendation 7. Monitor the progress of students receiving supplemental instruction and other students who are at risk.

Unit 1 Understanding and Applying Proportional Relationships		
Concepts/Clusters	Prerequisite Standards to Support CC Math 7	Suggested Resources
Analyze proportional relationships and use them to solve real-world and mathematical problems.	<p>6.RP.1: Understand the concept of a ratio and use ratio language to describe a ratio relationship between two quantities. <i>For example, “The ratio of wings to beaks in the bird house at the zoo was 2:1, because for every 2 wings there was 1 beak.” “For every vote candidate A received, candidate C received nearly three votes.”</i></p> <p>6.RP.2: Understand the concept of a unit rate a/b associated with a ratio $a:b$ with $b \neq 0$, and use rate language in the context of a ratio relationship. <i>For example, “This recipe has a ratio of 3 cups of flour to 4 cups of sugar, so there is $3/4$ cup of flour for each cup of sugar.” “We paid \$75 for 15 hamburgers, which is a rate of \$5 per hamburger.”</i></p> <p>6.RP.3: Use ratio and rate reasoning to solve real-world and mathematical problems, e.g., by reasoning about tables of equivalent ratios, tape diagrams, double number line diagrams, or equations. a. Make tables of equivalent ratios relating quantities with whole number measurements, find missing values in the</p>	<ol style="list-style-type: none"> Inside Mathematics: Truffles http://www.insidemathematics.org/assets/common-core-math-tasks/truffles.pdf Illustrative Math: Games at Recess https://www.illustrativemathematics.org/illustrations/76 Illustrative Mathematics: Friends Meeting on Bicycles https://www.illustrativemathematics.org/illustrations/137 Mathematics Assessment Project: Sharing Costs: Riding to School http://map.mathshell.org/materials/lessons.php?taskid=489&subpage=problem) Dan Meyer: Leaky Faucet http://threeacts.mrmeyer.com/leakyfaucet/ Dan Meyer: Nana’s Chocolate Milk http://threeacts.mrmeyer.com/nana/ Dan Meyer: Coke vs Sprite http://mrmeyer.com/threeacts/cokevsprite/ Dan Meyer: Shower vs Bath http://mrmeyer.com/threeacts/showervbath/

Examples of Essential Questions for Unit 4	Standards for Mathematical Practice	
<ol style="list-style-type: none"> How might knowing the area of triangles and rectangles assist in finding the area of other polygons? How is geometry a part of our everyday lives? Why might conceptually understanding the characteristics of two-dimensional and three-dimensional figures be helpful? Why is <i>organizing</i> data essential to its’ usefulness? Why might graphs be used to represent statistical relationships? What might the benefit be in displaying data in various ways? And, in what ways might we choose to display this data? Why might collected data to answer a statistical question have a distribution (center, spread, and overall shape)? 	<ol style="list-style-type: none"> Make sense of problems and persevere in solving them. Reason abstractly and quantitatively. Construct viable arguments and critique the reasoning of others. Model with mathematics. Use appropriate tools strategically. Attend to precision. Look for and make use of structure. Look for and express regularity in repeated reasoning.

Performance Objectives for Unit 4 <i>Students will grow in their ability to:</i>	*Guiding Questions for Implementing Standards for Mathematical Practices #7 and #8
<ol style="list-style-type: none"> 1. Know the formulas for rectangles and triangles 2. Decompose shapes into rectangles and triangles to determine the area 3. Apply decomposing techniques in the context of solving real-world and mathematical problems 4. Recognize a statistical question as one that anticipates variability in the data related to the question 5. Recognize that data can have variability 6. Understand that a set of data has a distribution 7. Describe a set of data by its center 8. Describe a set of data by its spread and overall shape 	<ol style="list-style-type: none"> 1. What observations have you made about ...? 2. What do you notice when ...? 3. What parts of the problem might you eliminate? 4. How would you know if ... makes a pattern? 5. What useful ideas have we learned before that come in handy when solving this problem? 6. How does this relate to ...? 7. In what ways might this problem connect to other mathematical concepts? 8. Will the same strategy work in other situations? 9. Is this always true, sometimes true, or never? 10. How would you prove that ...? 11. What is happening in this situation? 12. Could we make a mathematical rule for ...? 13. What mathematical consistencies do you notice? 14. What predictions or generalizations can this pattern support?

*NOTE: The *Guiding Questions for Implementing Standards for Mathematical Practices* should be used throughout ALL units and are not exclusive to any particular unit.

TOOLS TO ENGAGE KINESTHETIC AND VISUAL LEARNERS

The following are a just a few hands-on (or virtual) manipulatives to engage and support the learning for our kinesthetic and visual learners.

INSTRUCTIONAL STRATEGIES FOR IMPLEMENTING THE STANDARDS FOR MATHEMATICAL PRACTICES

The following instructional strategies represent just a short list of strategies recommended to ensure student engagement with the Standards for Mathematical Practices, as well as the Common Core College and Career Readiness Anchor Standards for Literacy (Reading, Writing, Speaking, and Listening).

Instructional Strategies	Description
1. Activating Prior Knowledge	<i>Activating Prior Knowledge</i> allows students to connect concepts learned previously to content being taught at the time. This strategy ensures coherence throughout the course.
2. Carousel	<i>Carousel</i> allows for students to collaborate on a particular problem in groups of 3-4. Students take turns with working on a problem, passing it around, round-robin style as they add to solving the problem, while checking the work of others throughout the process.
3. Corners	The <i>Corners</i> strategy works by having students select from four options (which are posted in each of the corners of the room). Once students have chosen their corners, they may be asked to defend their choice and listen to their peers' reasons for choosing a particular option, or corner.
4. Error Analysis	This strategy calls for students to analyze a problem that has been solved incorrectly. They must work with a partner to figure it out, discuss their findings, write the correct solution, and write a few paragraphs on their process and thinking.
5. Exit Tickets	<i>Exit Tickets</i> help students synthesize the learning of the day's lesson. These can be simple questions or quick-writes for students to submit at the end of the period.
6. Multiple Representations	This strategy allows students to create multiple representations in the form of pictures, tables, graphs, equations, formulas, and other models to analyze and interpret data and/or other information.
7. Poster Presentations	Students use large flip chart paper (during any stage of instruction) to collaborate, provide visuals, and solve problems. After each group is done creating posters, they may present them to the larger group or conduct a "gallery walk" to see each group's findings.

Office of Curriculum, Instruction and School Support**

Instructional Strategies	Description		
8. Questioning the Text	This strategy allows students to question the text, the problem or the situation. They can annotate and collaborate to incite discourse in the classroom.		
9. Sentence Frames	<p>Sentence Starters give students a structure for sharing their thoughts and ideas and guide accountable talk. Examples for use include:</p> <table style="width: 100%; border: none;"> <tr> <td style="width: 50%; vertical-align: top;"> <p>I think the best way to solve this problem is ... I would not solve it this way because ... I (agree/disagree) because ... I don't think that will work because ... I tried ... I think ... will happen. I solved the problem like this because ... What if we tried ... I have another approach to the problem. What about ...</p> </td> <td style="width: 50%; vertical-align: top;"> <p>I understand what you are saying, but what about ... Now I understand ... because ... I agree with ... because ... At first, I though ... but, now I think ... I agree with ... because ... What I hear you saying is ... I don't understand ... but, I do understand ... Another approach to this problem could be ...</p> </td> </tr> </table>	<p>I think the best way to solve this problem is ... I would not solve it this way because ... I (agree/disagree) because ... I don't think that will work because ... I tried ... I think ... will happen. I solved the problem like this because ... What if we tried ... I have another approach to the problem. What about ...</p>	<p>I understand what you are saying, but what about ... Now I understand ... because ... I agree with ... because ... At first, I though ... but, now I think ... I agree with ... because ... What I hear you saying is ... I don't understand ... but, I do understand ... Another approach to this problem could be ...</p>
<p>I think the best way to solve this problem is ... I would not solve it this way because ... I (agree/disagree) because ... I don't think that will work because ... I tried ... I think ... will happen. I solved the problem like this because ... What if we tried ... I have another approach to the problem. What about ...</p>	<p>I understand what you are saying, but what about ... Now I understand ... because ... I agree with ... because ... At first, I though ... but, now I think ... I agree with ... because ... What I hear you saying is ... I don't understand ... but, I do understand ... Another approach to this problem could be ...</p>		
10. Think Alouds	In <i>Think Alouds</i> , students orally dictate their thought process to show their comprehension of a problem, text or situation. It helps when trying to make sense of problems and considering different access points to solving a problem.		
11. Think-Pair-Share	Students engage in <i>Think-Pair-Share</i> by initially thinking about a problem or situation independently, then pair up with a classmate to share their thoughts or ideas.		
12. Think-Ink-Pair-Share	An alternative to <i>Think-Pair-Share</i> is <i>Think-Ink-Pair-Share</i> which allows students to think independently, write their thoughts on paper, and then pair up with a partner to share their thoughts.

SAMPLE TASKS TO SUPPORT CC MATH 7

The following are a few examples to help support student learning in this course. These examples are not meant to be exhaustive, but are representative of the types of tasks that should be afforded to students enrolled in the course.

Sample Tasks to Support Common Core Math 7 Tutorial Lab

Sample Task #1: The Candy Jar Task

The candy jar shown below contains Jolly Ranchers (the rectangles) and Jawbreakers (the circles). Use that information to complete the following questions.

1. What is the ratio of Jolly Ranchers to Jawbreakers in the candy jar?
2. Write as many ratios as you can that are equivalent to the first ratio that you wrote in Question #1.
3. Suppose you had a new candy jar with the same ratio of Jolly Ranchers to Jawbreakers as shown above, but it contained 100 Jolly Ranchers. How many Jawbreakers would you have?
4. Suppose you had a new candy jar with the same ratio of Jolly Ranchers to Jawbreakers as shown above, but it contained 720 candies. How many of each candy would you have?

Source: LAUSD Concept Task

Sample Task #2: Smallest and Largest

In this task, make up calculations with answers that are:

1. As **large** as possible
2. As **small** as possible

For each calculation, choose two different numbers from the list.

$\frac{1}{2}$ 1 2 10 20 50

$$\square + \square = \underline{\hspace{2cm}}$$

$$\square - \square = \underline{\hspace{2cm}}$$

$$\square \times \square = \underline{\hspace{2cm}}$$

$$\square \div \square = \underline{\hspace{2cm}}$$

Lastly, **explain** how to choose numbers to make the answer to a division problem **as small as possible**.

Sample Tasks to Support Common Core Math 7 Tutorial Lab

Sample Tasks #3: Nuts

This circle graph shows the amounts of five different kinds of nuts grown in the U.S. each year.

Given:

Here are some facts about the nuts grown:

- Most of the nuts are Almonds
- A quarter of the nuts are Walnuts
- The least grown nuts are Macadamias
- There are about twice as many Pistachios as Macadamias grown
- The fifth type of nut is Hazelnut

Questions:

1. Write the correct kind of nut on each label.
2. The total of all nuts grown is 956 thousand tons. What amount of walnuts are grown? Show all calculations.
_____ thousand tons
3. Kealoha says that 80% of all the nuts grown in the U.S. are almonds. Explain why Kealoha is wrong.

Source: MARS Tasks (Grade 6)

Sample Task #4: Buying Books

At *Mai Ka'i Bookstore*, Malia bought 3 paperback books for \$18.50

1. What would 7 books cost her?
2. How many books might Malia purchase with \$55?
3. How many books could she purchase with \$175?

Create a table, a graph, an equation, and one paragraph, to justify your solution.
